Quick Fermentation Sample prep with the eXtreme Filter vial VS syringe filters: wasted time and sample loss

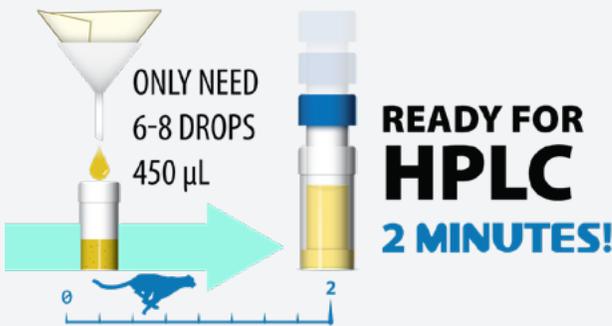

“For my plant, the vials are everything that I am looking for as a lab manager: consistent, accurate, easy to use, simplify prep time, lessen inventory, and are cost effective!”

-Cole Carbon Green Bioenergy

### Key Features

- 2 minutes from collection to HPLC
- Less Time Filtering = Less Evaporation
- Reduce enzyme use because of more accurate readings
- Eliminate multiple syringe filters, syringe, HPLC cap & vial

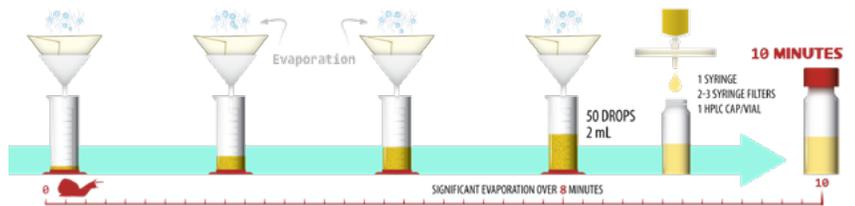

### New Method = eXtremeFV® with Multi-Layered Filtration Technology

### New Method (Filter Vials)

	0-10 Hour	11+ Hour
Filter Vial	1	1
HPLC Vial	0	0
HPLC Cap	0	0
Labor (time)	2 minutes	2 minutes
Gravity Filtration Time (evaporation of sample)	1 minute	1 minute

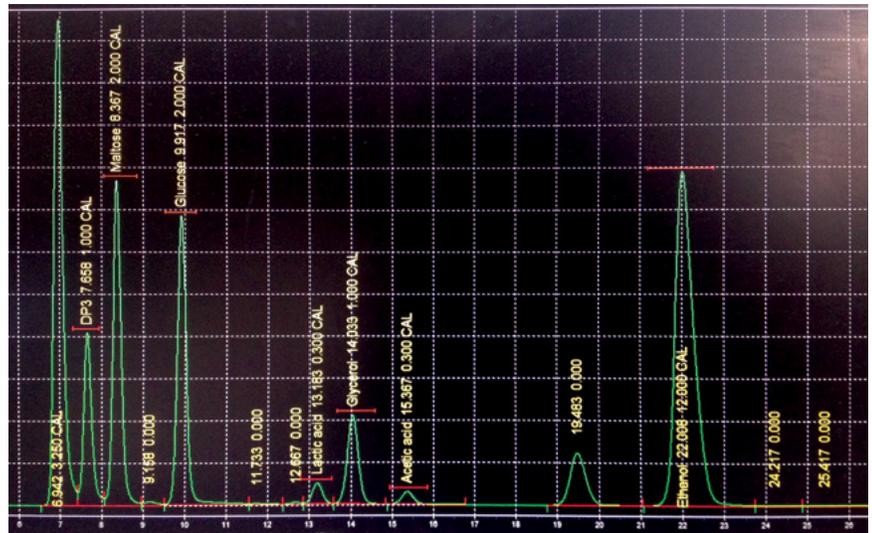

### Old Method = Labor Waste, Sample Evaporation & Unwanted Consumables

### Old Method (syringe filters)

	0-10 Hour	11+ Hour
Syringe Filter	up to 3	1
HPLC Vial	1	1
HPLC Cap	1	1
Labor (time)	10 minutes	10 minutes
Gravity Filtration Time (evaporation of sample)	8+ minute	8 minute

### Chromatogram

“...I have seen much less down time with my machine since switching to your extreme filter vials. I am very impressed with the results and will not be switching back to syringe filters.”

-Ethanol plant lab manager
